A single 350W solar panel is rated to produce 350 watts of power, but the actual power output you see from your panels depends on many factors, including geographic location, shading, and the tilt of your panels. The number of solar panels you'll install depends on the electricity you want to generate and the space available for solar panels.

350W solar panels are around standard when it comes to space efficiency on your roof, and a typical roof of a single-family home will likely have enough space for the number of panels needed to offset electricity costs. Consider a ground-mounted solar system if you have a small roof or a roof you don't want to be covered with solar panels.

The efficiency range of 350W solar panels lies between 15 and 22% depending on the manufacturer. The modules also vary in backsheet and frame colors, as well as overall aesthetics. Depending on your circumstances, you might also want to consider such characteristics as weather resistance, degradation rate and temperature coefficient.

DUSOL's - sister company of MAXIMA with manufacturing facility in UAE - Standard range of solar panels are made using standard cells without making any alteration to the cell's physical and/or electrical characteristics. The standard range of DUSOL modules consists of either 36, 60 or 72 cells interconnected to elevate the voltage and ...
