Lithium Ion batteries can be stressed when left at full charge for long periods of time. As the UPS would remain on standby with fully charged batteries most of the time, a device that took this into consideration would be just the fit. I would eventually settle on the LTC4040, a 2.5A Battery Backup Power Manager from Analog Devices.

The circuit will be powered with 5V DC main power supply which will be either a wall plug supply or a power bank with minimum 5V voltage but it does not matter I hope. Now I would like to add a battery backup power in case the main power supply fails or will be removed, just to be able to put the chip in sleep mode and keep the real time clock ...

I have a device which is rated at 5V 300mA and power is supplied via a USB cable. I want to add a battery backup using 4 X AA niMH rechargeable batteries (ie 4.8V). I have a simple circuit I have used for another application however the supply voltage for that was much higher than the rechargeable battery (see attached).
