Water bags or pouches are a relatively new product allowing hassle-free storage of limited amounts of water. They are only suitable for short-term water storage. Read our guide to emergency water bags ...

Most often, water storage is evaluated, designed, developed, and managed as independent facilities for specific stakeholders, resulting in siloed arrangements that are unsustainable and inefficient. o Poor planning of water storage comes with a price.

Colorado boasts above-ground reservoirs and below-ground aquifer storage; reservoirs that are owned and managed by a single entity and others that are shared; storage that meets the needs of municipalities, farmers, the environment and recreation. It also has dams that serve as flood control and others that hold back water to release later to downstream [...]

Q: What is a share of water? A: A "share" refers to an interest in a ditch company. It represents a portion of water that flows through the ditch. The amount of water represented by a share varies greatly among ditch companies and from year to year, depending on how much water is available in storage and from the current year's snowpack.
