In case of low-grade ore containing 5 - 25% antimony, the suitable method is oxide volatilization (by roasting and volatilization). For the intermediate grade i.e. 25 - 40% Sb, ores are smelted in a blast furnace at 1300-1400 °C producing pure Sb metal, SO₂ gas, and slag.

For the intermediate grade i.e. 25 - 40% Sb, ores are smelted in a blast furnace at 1300-1400 °C producing pure Sb metal, SO₂ gas, and slag. Finally, in case of the high-grade ores containing 45 - 60% Sb, antimony is extracted by liquation and/or iron precipitation.

This study reports on the assessment of the impact of antimony mine wastes from Xikuangshan (XKS) Antimony Mine in Lengshuijiang City, Hunan Province. We focus on the leaching of a number of potentially toxic elements (PTEs) from residues from the processing of antimony ore. The PTE content of ore processing waste and solutions generated by leaching ...

Antimony has been recovered from its ores or concentrates by pyrometallurgical and hydrometallurgical treatment techniques. Beside these two processes, bio-hydrometallurgical process has been attempted in order to compete or replace the existing processes; however, most of works reported are at the lab scale.

Antimony is a type of critical metal for the energy transition. The antimony industry chain is distributed among the major developed and developing countries around the world. With the development of clean energy technology, the demand for antimony in photovoltaic and energy storage fields will increase significantly.

Antimony is chalcophile, occurring with sulfur and the heavy metals, lead, copper, and silver. Over a hundred minerals of antimony are found in nature. Stibnite (Sb₂S₃) is the predominant ore mineral of antimony. The most important use of antimony metal is as a hardener in lead for storage batteries.

As China curbs exports of the strategic and critical metalloid, America's Last Frontier reemerges as potential domestic supplier. China's coming state-controlled restrictions on antimony exports has significantly elevated the criticality and price of this semi-metal that is already a top concern from many officials within the U.S. Department of Def...
