Better results are generally achieved by valorizing the differences more than forcing conformity. This work aims to discuss the specific energy density opportunities of battery energy storage, and energy storage in fuels, and to propose hybrid configurations delivering better performance than battery-only eVTOL.

FESS has a unique advantage over other energy storage technologies: It can provide a second function while serving as an energy storage device. Earlier works use flywheels as satellite attitude-control devices. A review of flywheel attitude control and energy storage for aerospace is given in [159].

Pomega Energy Storage Technologies (Kontrolmatik Technologies) Pomega Energy Storage Technologies broke ground on its Colleton County, SC facility in February. The facility will require a capital investment of \$279 million, create 575 new jobs, and is expected to begin production in mid-to-late 2024.

Electric vehicles (EVs) are powered by batteries that can be charged with electricity. All-electric vehicles are fully powered by plugging in to an electrical source, whereas plug-in hybrid electric vehicles (PHEVs) use an internal combustion engine and an electric motor powered by a battery to improve the fuel efficiency of the vehicle.
