In fact, as standard, a solar panel tends to be about 85% efficient (15% energy lost in the conversion). What this means when it comes to inverters, is that you must ensure your solar panels still produce enough wattage to meet the minimum requirements of the inverter, even after energy loss/efficiency has been taken into consideration.

Solar inverter costs and savings. The type of inverter that you need will depend on the system size required by your property. Although prices can vary greatly, a new string inverter for a typical residential home would be approximately £500-£1,000.

Suppose your solar panel array has an open-circuit voltage (V_{oc}) of 400V and a maximum power point (V_{mpp}) of 350V. In this case, you should choose an inverter with a maximum input voltage exceeding 400V (to handle the panels' V_{oc} safely) and an MPP voltage range of 350V. See how much it would cost to get solar panels installed on your home.
