that North Korea was developing a Super-EMP nuclear warhead.<sup>2</sup> Pyongyang consistently tries hiding its real capabilities. For example, on December 12, 2012, North Korea successfully misled Western analysts into thinking that their long-range missile test, scheduled for that day, was canceled due to technical problems. This lowered expectations and

At least 11 of the launchers were visible during North Korea's February 2023 military parade, suggesting a substantial production capability (Panda 2023b). If North Korea can now mass-produce heavy launchers for its ICBMs, there would be significantly fewer constraints on the number of long-range missiles that the country can operate.
