The ARC stud welding process produces weld power through one of three standard DC welding power sources. These are Transformer-Rectifier type, Motor/Generator type, or Storage Battery type. A ceramic ferrule is required in ARC stud welding to maintain the proper atmosphere in the weld area. ARC stud welding is generally used for studs over 1/4" in

The charging voltage of the capacitor is highly stable, and the capacitance of the energy storage capacitor changes very little during long-term operation, which ensures the consistency of the energy stored in the capacitor. This energy storage stud welding machine provides a reliable guarantee for the stability of welding quality.
