The book is so comprehensibly written that at least five to six courses on power systems can be designed. It has been the constant endeavour of the author to understand the difficulties of his students in the classroom and accordingly prepare the lecture notes after consulting various journals and books on electrical power systems.

This document provides a textbook companion for the book "Electrical Power Systems" by C. L. Wadhwa. It was created by Anuj Bansal and contains Scilab codes that correspond to examples and concepts from the textbook. The codes are organized by chapter and cover topics like line calculations, transmission lines, high voltage DC transmission, voltage control, transients, and ...

C L Wadhwa was a former Professor and Head, Department of Electrical Engineering at Delhi College of Engineering, Delhi, a technical institution of international repute. He had an experience of more than 35 years in teaching to undergraduate as well as postgraduate classes in the areas of electrical machines, transmission networks, utilization of electric ...

The codes are organized by chapter and cover topics like line calculations, transmission lines, high voltage DC transmission, voltage control, transients, and more. The codes are intended to help students and teachers working with the concepts in the Electrical Power Systems textbook.

"The best books I have ever seen are A Course of Power System by J.B. Gupta and Electrical Power System by C.L. Wadhwa, which are ideal for undergraduate students. For diploma students, Power System by V.K. Mehta is the best. Power System by I.J. Nagrath is written in a complex language that I find difficult to understand, so I do not recommend ...

Electric Power System is the most capital intensive and the most complex system ever developed by man. Not only that the system should be operated most effectively and efficiently, any abnormality in the operation of the system must be detected fast and reliable operation of the protective system must be ascertained.
