Battery Energy Storage Systems (BESS) are one way to store energy so system operators can use their energy to soft transition from renewable power to grid power for uninterrupted supply. Ultimately, battery storage can save money, improve continuity and resilience, integrate generation sources, and reduce environmental impacts.

Hence, a popular strategy is to develop advanced energy storage devices for delivering energy on demand.[1-5] Currently, energy storage systems are available for various large-scale applications and are classified into four types: mechanical, chemical, electrical, and electrochemical,[1,2,6-8] as shown in Figure 1. Advances in TiS<sub>2</sub> for ...

The authors in [28 - 30] presented a novel RPC based on SC energy storage, and an energy storage plan and control strategy were discussed. In these studies, each scheme effectively used RBE and realised load shifting. However, restricted by the power supply mode, these schemes could not achieve good performance in terms of NS governance and ...
