energy generation - from a source such as solar photovoltaics (PV) - the owners or managers of such buildings create the opportunity to both save money and earn income from their investment. Electricity self-generation is likely to result in reduced energy bills, while potential revenues may come from two sources: from energy companies

Take control of your energy supply, cut your bills and move towards a more sustainable future. With Eaton's energy storage systems, homes and businesses gain access to a safe, reliable and efficient power management that harnesses the full potential of renewable sources.

Committed to drive the energy, economic and social transition, the Catholic University of Lille in France launched the Live Tree program in 2013 with the aim to transform the University into a zero carbon campus by 2035. Eaton supports them with the installation of Eaton xStorage Buildings energy storage system. Watch the video below to ...

These meters will provide the xStorage Home system with a full overview of household energy consumption. If the PV-generated energy is not sufficient to power all household loads, the system will start discharging the battery pack. This mode can be selected in the UI operation mode window as shown in Figure 5.

District cooling plants utilizing thermal ice storage provide both first cost and energy cost savings. The distribution cooling pipes are typically sized for a delta-T of 20°F (11.1°C). This reduces the chilled water flow volume, thus enabling the use of smaller pipes and pumps.

The ice storage provides the energy management ability to shift energy use to lower cost periods of time. Heat exchangers, located at each building, are often used to separate the distribution fluid from the build cooling loop.
