A knife switch is a type of switch used to control the flow of electricity in a circuit. It is composed of a hinge which allows a metal lever, or knife, to be lifted from or inserted into a slot or jaw. The hinge and jaw are both fixed to an insulated base, and the knife has an insulated handle to grip at one end. Current flows through the switch when the knife is pushed into the jaw.

The flow battery energy storage system and system components must also meet the provisions of Parts I and II of Article 706. Unless otherwise directed by Article 706, flow battery energy storage systems have to comply with the applicable provisions of Article 692. Other energy storage technologies
