China is currently in the early stage of commercializing energy storage. As of 2017, the cumulative installed capacity of energy storage in China was 28.9 GW [5], accounting for only 1.6% of the total power generating capacity (1777 GW [6]), which is still far below the goal set by the State Grid of China (i.e., 4%-5% by 2020) [7].Among them, Pumped Hydro Energy ...

ESSs can be classified according to the form of energy stored, their uses, storage duration, storage efficiency, and so on. This article focuses on the categorisation of ESS based on the form of energy stored. Energy can be stored in the form of thermal, mechanical, chemical, electrochemical, electrical, and magnetic fields.
