Compressed air energy storage (CAES) is a promising storage technology with high energy storage capacity and power rating [3]. In CAES, ambient air is compressed using surplus or intermittent electricity, then stored in underground hard-rock or salt caverns or artificial storage vessels during low demand period.

2. Introduction A flywheel, in essence is a mechanical battery - simply a mass rotating about an axis. Flywheels store energy mechanically in the form of kinetic energy. They take an electrical input to accelerate the rotor up to speed by using the built-in motor, and return the electrical energy by using this same motor as a generator. Flywheels are one of the most ...
