For energy storage, the capital cost should also include battery management systems, inverters and installation. The net capital cost of Li-ion batteries is still higher than \$400 kWh -1 storage. The real cost of energy storage is the LCC, which is the amount of electricity stored and dispatched divided by the total capital and operation cost ...

The deficiency of inertia in future power systems due to the high penetration of IBRs poses some stability problems. RESs, predominantly static power converter-based generation technologies like PV panels, aggravate this problem since they do not have a large rotating mass [1].As another prominent renewable resource, wind turbines exhibit higher inertia ...
