A hoop winding can be termed a high-angle helical winding wound at a 90° angle, usually 85° to 90° [93]. In the helical winding, the value of α lies in the range of 0° to less than 90°, or between 5° and 85° [47]. Fibers are wound from pole to pole in polar winding; the angle is not constant and depends on the mandrel's length, Fig. 5 (c).
