Energy, primarily derived from fossil fuels, drives the world's economy. The traditional energy sector--which includes some of the world's largest corporations--extracts, refines, distributes, and sells gas, oil, and coal products that are then used to power our factories, keep our cars moving, heat and/or cool our homes, produce electricity, and much more.

Cloud computing is a general term for the delivery of hosted computing services and IT resources over the internet with pay-as-you-go pricing. Users can obtain technology services such as processing power, storage and databases from a cloud provider, eliminating the need for purchasing, operating and maintaining on-premises physical data centers and servers.

Cloud storage (sometimes called "cloud-based storage") allows you to file your documents, photos, and files in a secure location outside your device.
