

A hybrid inductive and capacitive architecture of a DC/DC converter has been proposed in, which can boost an input voltage of about 200 mV, but it still requires external inductors. An overview of the state of the art ...

: A novel magnetically-coupled energy storage inductor boost inverter circuit for renewable energy and the dual-mode control strategy with instantaneous value feedback of output voltage are proposed. In-depth research and analysis on the circuit, control strategy, voltage transmission characteristics, etc., providing the parameter design method of magnetically ...

With greater power density, a hybrid power source that combines supercapacitors and batteries has a wide range of applications in pulse-operated power systems. In this paper, a supercapacitor/battery semi-active hybrid energy storage system (HESS) with a full current-type control strategy is presented. The studied HESS is composed of batteries, ...

This paper designs a topology suitable for the PV power generation system, as shown in Figure 3, because the boost range of single-stage Boost converter is too narrow, in the case of low power, it ...

Our research efforts concluded in the detailed design and study of a three-phase interleaved DC-DC boost converter linked with an energy storage system, specifically adapted ...

The size of Wide Band Gap (WBG) power electronics based converter is often determined by the inductive component. Therefore, high power density inductor design is required to reduce overall weight and volume of converters. In this paper, the novel nanocrystalline powder core is proposed and designed for a SiC MOSFET based DC/DC boost converter. Finite Element (FE) models of ...

Solid-state Marx pulse generators are widely used in biomedical electroporation, food processing, and plasma material modification. It uses parallel charging of energy storage capacitors and series discharging to achieve high-voltage pulse output. However, the isolation resistance used to charge the energy storage capacitor seriously affects the generator's charging speed and ...

In 22, a switched inductor technique is utilized to construct a high step-up boost converter with fewer components and a simple structure, but the voltage gain is significantly reduced at low voltage inputs with low efficiency due to the hard-switching work condition.

Block diagram of an energy harvesting system. Regarding the energy sources and harvester, there are several alternatives that have been reported in the literature.

The use of nonlinearity to boost performance is also considered in [14] where a nonlinear vibration energy harvester based on the concept of high ... for inductive energy harvesting. The performance of the inductive harvester greatly depends on the ... of the system. Therefore, some form of energy storage is generally included. In [34] the ...

The tests were conducted under different input and load conditions to verify that the converter has stable output characteristics. In addition, the proposed converter has low input current ripple, high voltage gain, low switching stress, and common ground characteristics, which makes it suitable for integrated multi-energy storage systems.

5mW-to-10mW input power range inductive boost converter for indoor photovoltaic energy harvesting with integrated maximum power point tracking algorithm ... the remote sensors of the wireless sensor network to obtain power from the environment for their entire lifetime and an energy storage device, such as a battery, is required to regulate ...

In this paper, the novel nanocrystalline powder core is proposed and designed for a SiC MOSFET based DC/DC boost converter. Finite Element (FE) models of the nanocrystalline powder core ...

This paper describes a groundbreaking design of a three-phase interleaved boost converter for PV systems, leveraging parallel-connected conventional boost converters to reduce input current and output voltage ripple while improving the dynamic performance. A distinctive feature of this study is the direct connection of a Li-Ion battery to the DC link, which eliminates ...

The solid-state Marx pulse generator is widely used in various fields such as biomedical electroporation, food processing, and plasma material modification. In this paper, an inductor is chosen as an isolation device and by adding a switch to the circuit, a solid-state boost-Marx pulse generator (BMPG) is formed. On the one hand, the inductor forms a boost circuit to ...

Solid-state Marx generator circuits have been widely studied in recent years. Most of them are based on

capacitive energy storage (CES), with the basic principle of charging in parallel and discharging in series. In this article, we propose a solid-state Marx circuit using inductive energy storage, where inductors play the role of principal energy storage element. ...

In this paper, the principle of inductive energy storage (IES) is applied to twisted pair wire (TPW), served as energy storage unit for generating nanosecond pulse. As a kind of transmission line, the electromagnetic field constraint of TPW is realized by twisting, so it has greater bent flexibility than coaxial transmission line, which makes it ...

A Buck-Boost inductor has to handle all the energy coming toward it -- 50 mJ as per Figure 5.4, corresponding to 50 W at a switching frequency of 1 MHz. Note: To be more precise for the general case of $i \leq 1$: the power converter has to handle P_{IN} / f if we use the conservative model in Figure 5.1, but only P_O / f if we use the optimistic model.
