On the inverter screen there is an arrow between the inverter and battery - this indicates power flow between the two . Arrow pointing towards the battery means the battery is accepting a charge ; Arrow pointing away from the battery means the battery is discharging energy ; Energy (kW) will be shown above the arrow

Battery Energy Storage. Batteries store DC power, which is produced by solar panels. Inverters convert this DC power to AC for home or business use and can charge batteries by directing excess energy to storage rather than immediate use. In the event of a grid outage or poor weather conditions, inverters switch to battery power automatically.

This paper investigates the use of power semiconductor devices in a nine - level cascaded B-bridge (CHB) multilevel inverter topology with an integrated battery energy storage system (BESS) for a 13.8kV medium voltage distribution system.
