

List of hypothetical solar system objects

Hypothetical Stellar Objects are stellar bodies that were theorized to have either existed or were disproven by more reliable models or from a lack of evidence. These, just like hypothetical planets and moons, were used to explain phenomena from across the Solar System that hasn't been explained. Here is a list of the known hypothetical (and disproven) stellar bodies

Parts-per-million chart of the relative mass distribution of the Solar System, each cubelet denoting 2×10^{24} kg. This article includes a list of the most massive known objects of the Solar System and partial lists of smaller objects by observed mean radius. These lists can be sorted according to an object's radius and mass and, for the most massive objects, volume, density, and surface ...

List of Solar System objects. From Wikipedia, the free encyclopedia. The following is a list of Solar System objects by orbit, ... Oort cloud (hypothetical) Hills cloud/inner Oort cloud; Outer Oort cloud; Euler diagram showing the types of bodies orbiting the Sun. The Solar System also contains:

Hypothetical bodies of the Solar System are astronomical bodies suggested or once believed to exist within the Solar System, but which have either not been proven to exist or been proven ...

Note: Data above as of June 24, 2024. Source: JPL, [17] NASA SSD Simulator, [18] and for New Horizons. [19] Solar escape velocity is a function of distance (r) from the Sun's center, given by $v = \sqrt{2GM/r}$, where the product GM sun is the heliocentric gravitational parameter. The initial speed required to escape the Sun from its surface is 618 km/s (1,380,000 mph), [20] and drops down to 42.1 ...

This is the talk page for discussing improvements to the List of hypothetical Solar System objects article. This is not a forum for general discussion of the article's subject. Put new text under old text. ... "Planet X" is a term used to describe any hypothetical object beyond Neptune whose existence is inferred through gravitational ...

Here are the top ten hypothetical astronomical objects that could actually exist. 10 Zombie Star. Photo credit: NASA, ESA. As the name suggests, this type of star is one that, in a way, comes back from the dead. ... He imagined a solar system-sized solar power collector. He believed a civilization could enclose its star in a cloud of ...

hypothetical active icy object, many markers associated with pre- ... JWST has been used to study a wide range of solar system objects (see Table 1), setting the foundations for many future unique ...

Various unknown astronomical objects have been hypothesized throughout recorded history. For example, in the 5th century BCE, the philosopher Philolaus defined a hypothetical astronomical object which he called the "Central Fire", around which he proposed other celestial bodies (including the Sun) moved. [1] Artist's concept of Earth, orbited by a hypothetical second moon ...

List of hypothetical solar system objects

The planetoid dubbed Farfarout was first detected in 2018, at an estimated distance of 140 astronomical units (AU) from the sun -- farther away than any object had ever been observed. (One AU is ...

The object was estimated to have about 1/4 the diameter of Venus, and it showed the same phase as Venus. Later, the object was seen by other astronomers as well: by James Short in 1740, Andreas Mayer in 1759, J. L. Lagrange in 1761 (Lagrange announced that the orbital plane of the satellite was perpendicular to the ecliptic).

A hypothetical Solar System object is a planet, natural satellite, subsatellite or similar body in the Solar System whose existence is not known, but has been inferred from observational scientific evidence. Over the years a number of hypothetical planets have been proposed, and many have been disproved. However, even today there is scientific speculation about the possibility of ...

The object was estimated to have about one-quarter the diameter of Venus, and it showed the same phase as Venus. The object was later seen by other astronomers: James Short in 1740, Andreas Mayer in 1759, and Joseph Louis Lagrange in 1761. (Lagrange announced that the orbital plane of the satellite was perpendicular to the ecliptic.)

Astronomers have followed the downsizing of Jupiter's trademark Great Red Spot since the 1930s. Credit: NASA, ESA, and A. Simon (GSFC) News Release: 2014-24 Hubble has tracked immense dark storms on Neptune that appear and vanish over time. Credit: NASA, ESA, and M.H. Wong and A.I. Hsu (UC Berkeley) News Release: 2018-08 A giant polar cap, which ...

Hypothetical Planets are Planets that have not yet been discovered, but are thought to exist for certain reasons to explain phenomena across our solar system that has not been explained yet. Some hypothetical planets are false, due to being disproven to exist. Here is a list of the most known Hypothetical Planets.

Hypothetical Objects are objects that have not yet been discovered but are thought to exist for certain reasons to explain phenomena across our solar system that has not been explained yet. Some hypothetical planets are false, due to being disproven to exist. List [] Here is a list of the other Hypothetical objects. Regions in the Solar System []

Have you ever wondered what the solar system would look like with 1, 2, or 3 more planets, well I have added 11 hypothetical solar system objects that were or are theorized to exist. Link: Hypothetical Planets.zip List: Vulcan; a planet theorized to exist closer to the sun than mercury. View attachment 54147 Neith; a once believed to be a moon ...

List of hypothetical solar system objects

Often, these bodies preceded incredible discoveries that would further strengthen our understanding of our Solar System. Here's a look at some of the hypothetical bodies that ...

The number of dwarf planets in the Solar System is unknown. Estimates have run as high as 200 in the Kuiper belt [1] and over 10,000 in the region beyond. [2] However, consideration of the surprisingly low densities of many large trans-Neptunian objects, as well as spectroscopic analysis of their surfaces, suggests that the number of dwarf planets may be much lower, ...

In 1898, Hamburg scientist Dr. Georg Waltemath announced that he had located a system of tiny moons orbiting Earth. [11] [12]: 146 He had begun his search for secondary moons based on the hypothesis that something was gravitationally affecting the Moon's orbit.[13]Waltemath described one of the proposed moons as being 1,030,000 km (640,000 mi) from Earth, with a diameter of ...

List of hypothetical Solar System objects. Nemesis - Hypothetical star orbiting the Sun, supposedly responsible for extinction events; Planet Nine - Hypothetical Solar System planet; Theia - Planet hypothesized to have impacted Earth and created the Moon; Tyche - Hypothetical gas giant in the Oort cloud

Media in category "Hypothetical objects of the Solar System" The following 3 files are in this category, out of 3 total. Georg Waltemath announcement of discovery of second moon of earth.jpg 650 × 866; 79 KB. OLD PAGE OF SOLAR FAMILY WITH INCLUDING NIBURU.jpg 960 × 215; ...

Hypothetical Planets are planets that have not yet been discovered, but are thought to exist for certain reasons to explain phenomena across our solar system that has not been explained yet. Some hypothetical planets are false, due to being disproven to exist. Here is a list of the most known Hypothetical planets.

List of hypothetical Solar System objects; List of Mercury-crossing minor planets; Vulcan (hypothetical planet) References This page was last edited on 1 November 2024, at 14:03 (UTC). Text is available under the Creative Commons Attribution-ShareAlike 4.0 License ...

A hypothetical Solar System object is a planet, natural satellite, subsatellite or similar body in the Solar System whose existence is not known, but has been inferred from observational scientific evidence. Over the years a number of hypothetical planets have been proposed, and many have been disproven. However, even today there is scientific speculation ...

Due to perturbations in the Solar System, several hypothetical objects have been proposed. Shortly after Uranus was discovered, astronomers noted "irregularities" in his orbital path. ...
