Battery-powered ceiling lights can't be a substitute for electrically powered ceiling lights as battery-powered lights can't produce as much brightness as electric-powered lights, but the light you choose should give enough brightness for the need.

The lifespan of batteries in a battery-powered ceiling light depends on several factors such as the type and quality of batteries used, the brightness level of the light, and the frequency of use. Typically, alkaline batteries last for 8 ...

So to run that bulb for an hour you'll need 2 AA batteries. You'll be working say 8h per day, so you'll be going through 16 batteries per day. You could of course use bigger batteries, but even if you go for much bigger ones (and still small enough to be hanging from your ceiling), I doubt you'll get through a day without recharge.
