Maxwell found that two primary forms of energy, electric and magnetic energy, are not significantly different. They are closely associated. Electrical current results in its magnetic field, and changing magnetic field creates current. When magnetic energy is naturally combined with electric energy, it is called electromagnetic energy.

11.4 Energy Storage. In the conservation theorem, (11.2.7), we have identified the terms $\mathbf{E} \cdot \frac{d\mathbf{P}}{dt}$ and $\mathbf{H} \cdot \frac{d\mathbf{M}}{dt}$ as the rate of energy supplied per unit volume to the polarization and magnetization of the material. For a linear isotropic material, we found that these terms can be written as derivatives of energy density functions.
