The original Modular Machinery offers a lot of powerful features, but it runs with worrisome performance, especially with a large number of controllers. The community version adds an asynchronous interface, and all implementations of this interface can safely do a lot of work in an asynchronous form.

The penetration of renewable energy sources into the main electrical grid has dramatically increased in the last two decades. Fluctuations in electricity generation due to the stochastic nature of solar and wind power, together with the need for higher efficiency in the electrical system, make the use of energy storage systems increasingly necessary.
