

Motor energy storage calculation formula

Electrical power input is the energy a motor gets from outside. You find it by multiplying voltage (V) by current (I). This gives the motor's electrical power input: $\text{Input Power (W)} = \text{Voltage (V)} \times \text{Current (I)}$ In India, the usual AC voltage is about 230V. So, this input power shows the electric energy a motor uses over time.
