

Multifunctional energy storage vehicle

The data mining reveals that multi-functional materials for energy storage and energy harvesting are, based on IDTechEx's criteria, still in a relatively early stage of development -- slightly ahead of self-healing materials and fully embedded circuitry, but falling behind power transmission and embedded sensors.

Here, authors show that electric vehicle batteries could fully cover Europe's need for stationary battery storage by 2040, through either vehicle-to-grid or second-life-batteries, and reduce ...

RANGE technologies seek to reduce the weight of vehicle energy storage systems while curtailing the need for added impact protection and enabling systems to perform additional functions. TECHNICAL OPPORTUNITY Multifunctional batteries have been an area of interest for over a decade with some limited success in the small unmanned aerial vehicle ...

Research on intelligent energy management method of multifunctional fusion electric vehicle charging station based on machine learning ... A typical physical architecture of the multifunctional charging station with photovoltaic power generation and battery energy storage was designed. Then considering the market price signal, charging load, PV ...

Structural Analysis of a Test Flight Vehicle with Multi-functional Energy Storage. ... Structural Analysis of Electric Flight Vehicles for Application of Multifunctional Energy Storage System. 15 July 2020. What's Popular AIAA Scitech 2019 Forum. 7-11 January 2019.

The multifunctional energy storage composite (MESC) structures developed here encapsulate lithium-ion battery materials inside high-strength carbon-fiber composites and use interlocking polymer ...

Multifunctional Composites for Vehicles July 7, 2021. Vehicle Technologies Office; Multifunctional Composites for Vehicles; Presentation given by Department of Energy (DOE) at the 2021 DOE Vehicle Technologies Office Annual Merit Review about Lightweight and Propulsion Materials. mat214_sodano_2021_p.

5. Conclusions In this paper, we introduced multifunctional energy storage composites (MESCs), a novel form of structurally-integrated batteries fabricated in a unique material vertical integration process.

The applications of multifunctional ECDs for energy storage, multicolor displays, deformable devices, self-chargeable devices, smart windows, actuators, etc., are exemplified. The future development trends and perspectives of multifunctional ECDs are also overlooked. The aim of this review is to guide and inspire further efforts in the ...

In the multifunctional configuration, the same amount of energy is stored in both conventional batteries (smaller) and additional multifunctional battery storages with the proportion being described by the degree of

structural integration TH in the range between 0-1.

Concept and scales of multifunctional structural energy storage demonstrated for an aircraft fuselage omega stringer: classical functional separation (0), integration of non-load-carrying ...

Additionally, the advantages of high-energy cells are also largely offset by the complexity and cost of the more demanding system-level engineering requirements. In this presentation, we introduce a new multifunctional energy storage composite (MESC) for the design of battery-power electrical vehicles.

Multifunctional Energy Storage Composites (MESC) accomplish both functionalities with minimal sacrifice in either. By integrating commercial lithium-ion chemistry inside structural support members, ... This paves the way toward energy storage vehicle chassis, seat supports, or other structural components which are currently vehicle deadweight ...

Structural energy storage composites, which combine energy storage capability with load-carrying function, are receiving increasing attention for potential use in portable ...

Development trend towards economically-viable vehicle electrification. [Adapted from ARPA-e RANGE Program Annual Meeting, Ft. Lauderdale, FL, USA, 2016 [5]] ... a multifunctional energy storage ...

Under an ARPA-E funded project, Stanford is developing "Multifunctional Energy-Storage Composites (MESC)" for the energy efficient design of light-weight electric vehicles. The focus of the ARPA-E program is on development for aircraft platforms. Stanford is collaborating with Acellent to develop and test the BMS system for automobiles.

Thus, current battery electric vehicle solutions are not very energy efficient. This study addresses a multifunctional material aimed to increase energy efficiency of electric road vehicles, boats, and ships as well as aircraft, providing intrinsic energy-storage capabilities in the vehicle interior and exterior structures.

This impacts the vehicle's empty weight as the battery system weighs up to 37% of the overall curb weight, requiring a larger volume storage area. 5-7 The use of multifunctional composites in-vehicle components is a requirement for the structural and spatial integrity of the vehicle. 4, 10-12 Electrical storage devices can be integrated into ...

potential to integrate energy storage functionalities into stationary constructions as well as mobile vehicles/planes. The development of multifunctional composites presents an effective avenue to realize the structural plus concept, thereby mitigating inert ...

Previous work has proposed and characterized the structural and electrical performance of Multifunctional Energy Storage Composite (MESC) structures: structural elements with embedded lithium-ion batteries which were developed by the Structures and Composite Laboratory (SACL) at Stanford University. This work

System-level Benefits of Multifunctional Structure/Energy Storage Concepts for an Advanced Hybrid-Electric Commercial Aircraft," presented at the Systems Analysis and Concepts Directorate ...

Fiscal Year 2022 Vehicle Technologies Office Program Wide Funding Opportunity Announcement . FOA # DE-FOA-0002611 . Name Location (city, state) Project Title Federal Cost Share ... Multifunctional Energy Storage Composites (MESC) for automotive vehicles \$3,737,047

Multifunctional energy storage and conversion devices that incorporate novel features and functions in intelligent and interactive modes, represent a radical advance in consumer products, such as wearable electronics, healthcare devices, artificial intelligence, electric vehicles, smart household, and space satellites, etc.

The electrospun CNT/epoxy-enhanced CFRP laminate demonstrated superior mechanical strength compared to standard CFRP and air-sprayed CNT/epoxy structures, highlighting its potential as a multifunctional energy storage composite for electric vehicles and structural applications [199]. The resin infusion under flexible tooling technique (RIFT ...

Multifunctional Energy Storage Composite Structures with Embedded Lithium-ion Batteries ... EV battery pack weight is a significant portion of the total vehicle weight, which is directly ...

estimated. Furthermore, general and aerospace specific potentials of multifunctional energy storages are discussed. Representing an intermediate degree of structural integration, experimental results for a multifunctional energy-storing glass fiber-reinforced composite based on the ceramic electrolyte Li_{1.4}Al_{0.4}Ti_{1.6}(PO₄)₃ are presented. Cyclic ...

Structural analysis results with multifunctional energy storage panels in the fuselage of the test vehicle are presented. The results indicate that the mid-fuselage floor composite panel could provide structural integrity with minimal weight penalty while supplying electrical energy. Structural analyses of the NASA X-57 Maxwell electric ...

Multifunctional energy storage composite structures with embedded lithium-ion batteries. Author links open overlay panel Purim Ladpli a, Raphael Nardari a, Fotis ... EV battery pack weight is a significant portion of the total vehicle weight, which is directly correlated with the vehicle's driving range limitations and high purchase cost [7,8]. ...

analysis results with multifunctional energy storage panels in the fuselage of the test vehicle are presented. Although the flight test was cancelled because of programmatic reasons and time ...
