

Mercury is just 5 degrees from the Sun in the sky, so it is difficult or impossible to see it. Venus can best be seen in the hours just after sunset. Visibility improves as the sunlight fades. Venus is visible by day, but may be hard to find. Mars can best be seen in the hours just before sunrise. Visibility deteriorates as the sky gets brighter.

# Planets in sky now

individual observer could see in an hour, assuming perfectly dark sky conditions. This number is an estimate, the number an observer could see in real conditions depends on the actual intensity of the shower (which can be highly variable) and on the sky conditions.

This all sky chart shows the sky above your location and is updated in realtime. Please note that this map does not reflect the actual lighting conditions and it shows the main astronomical objects even during daylight. Stars up to magnitude 5 and Solar System objects brighter than magnitude 10 are shown in the chart.

The map includes the Moon, stars brighter than magnitude 5, the five bright planets (Mercury, Venus, Mars, Jupiter, and Saturn), and deep-sky objects that can be seen without the use of optical aid. [How Do I Use the Interactive Sky Chart to Explore the Night Sky?](#) Learn sky chart basics in our short tutorial:

The planet will be easiest to see while it is highest in the sky during early evening. Much brighter Saturn will be shining about 14 degrees to Neptune's right (or celestial west).

Saturn is visible during most of the night, but it is best viewed in the late evening hours after sunset. Uranus can be seen for more than 10 hours during the late night/early morning and until sunrise. You may need binoculars. Neptune is roughly in the opposite direction of the Sun, so it is visible during most of the night.

3 days ago Tip 1: Planets are not visible anywhere in the sky. They are visible along the ecliptic. The ecliptic is the path of the sun across the sky. So notice carefully where the sun rises, along which path it moves during the day and where it sets. Planets are visible along this path at night. Tip 2: Generally, planets are brighter than most of the ...
