

Planets picture

What is the order of the planets as we move out from the Sun? This is a simple guide to the sizes of planets based on the equatorial diameter - or width - at the equator of each planet. Each planet's width is compared to Earth's equatorial diameter. There's also a handy list of the order of the planets moving away from our Sun.

The first spacecraft to visit Mars (Mariner 4), captured the first images of another planet from space. Viking 1 was the first spacecraft to successfully land on the surface of Mars, and Sojourner, part of the Mars Pathfinder spacecraft, was ...

Astronomy Picture of the Day. Images and photographs of our fascinating universe are featured daily, along with explanations from professional astronomers. Planetary Photojournal. Publicly released images from several solar system exploration programs. Faces of NASA.

Each day a different image or photograph of our fascinating universe is featured, along with a brief explanation written by a professional astronomer.

The Nine Planets is an encyclopedic overview with facts and information about mythology and current scientific knowledge of the planets, moons, and other objects in our solar system and beyond. The 9 Planets in Our Solar System. Mercury.

Planets picture

Our solar system is made up of a star--the Sun--eight planets, 146 moons, a bunch of comets, asteroids and space rocks, ice, and several dwarf planets, such as Pluto. The eight planets are Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus, and Neptune. Mercury is closest to the Sun. Neptune is the farthest.

The small planet has a diameter of 4.879 km / 3.032 mi. Venus. The second closest planet to the Sun. Venus is on average at a distance of 108 million km / 67 million mi or 0.72 AU away from the Sun. It is the hottest planet of the Solar system since its atmosphere keeps the temperatures almost consistently the same.

4 days ago· Our solar system is home to eight amazing planets. Some are small and rocky; others are big and gassy. Some are so hot that metals would melt on the surface. Others are freezing cold. We're learning new things about our neighboring planets all the time. We send spacecraft to take pictures, gather information, and find out more about them.
