Some no larger than 5mm by 5mm, are less than 1mm thick, but are able to switch hundreds of amps and hundreds of volts in microseconds. The largest power devices can control gigawatts of power and are the diameter of a coffee cup. The operating speed of the power semiconductors and PE systems are orders of magnitude faster than the power grid.

The ESS could be also used in case of a general blackout for the re-starting of the entire electrical system. Battery Energy Storage Systems. As mentioned above, there are many applications for energy storage systems and several benefits for the electrical system where an energy storage system is present.

Hence, mechanical energy storage systems can be deployed as a solution to this problem by ensuring that electrical energy is stored during times of high generation and supplied in time of high demand.
