OverviewSolar Aircraft CompanyPrudden-San Diego Airplane CompanySolar Division of International HarvesterWholly owned subsidiary of Caterpillar Inc.In March 1929, Prudden-San Diego Airplane Company changed its name to Solar Aircraft Company, a reference to San Diego's sunny climate. Solar Aircraft Company's main product was an all-metal passenger aircraft powered by three Siemens & Halske radial engines. Due to the Great Depression in 1929, the company was unable to market the aircraft and made only three airplanes.

Solar Impulse 2 circumnavigated the Earth without using a drop of fuel. Now, Skydweller Aero aims to use the plane to create the world's first commercially viable "pseudo-satellite."

Born in 1927 as the Prudden-San Diego Airplane Company, the outfit was renamed Solar Aircraft Company two years later. Initially an aircraft manufacturer, Solar had to diversify and manufacture components as well as ...

Prismatic has over 10 years of experience developing un-crewed air systems designed for flight in the stratosphere. BAE Systems completed the acquisition of Prismatic in 2021, and the combination of this Prismatic experience with trusted delivery capabilities from BAE Systems presents a leading opportunity for continuing development of PHASA-35 - our Persistent High ...

Skydweller Aero Logo "This is a true, world-changing first in the aerospace industry," said Robert Miller, CEO, Skydweller Aero, the aircraft's manufacturer, which is the only global manufacturer ...

The company was reincorporated in 1937 as the Solar Aircraft Company, dropping the "Ltd" from its name. [8] By 1939, Solar Aircraft Company had a work force of 229. [9] Military orders during World War II led to rapid expansion and by the end of the war the company had a workforce of 5,000, largely part of a massive effort to build more than ...

Solar Turbines is a global leader in providing energy solutions that help businesses, governments and public institutions find the perfect balance between affordable, available, and reduced carbon energy.. Ready to power with agile, affordable solutions that turns clean-burning natural gas into sustainable, cost-effective power - our innovative energy solutions support multiple industries ...

Today, Airbus is advancing solar cell technology to enable unmanned aerial vehicles to stay aloft in the stratosphere for extended periods - using only sunlight as energy. Our work in solar flight is focused on: Developing advanced photovoltaic solar panels that are lighter, more flexible and capable of capturing more energy per m² of surface;

Last month, the company launched the Kea Atmos Mk1 solar and electric-powered aircraft using an Audi e-tron to get it off the ground. Check out the video of it below. Kea Atmos Mk1 takeoff with an ...
