Hereby, we present the first version of our book Solar Energy: Fundamentals, Technology and Systems and hope that it will be a useful source that helps our readers to study the different topics of solar energy. It covers the topics that are treated in the three lec-tures on photovoltaics (PV) ...

What is photovoltaic (PV) technology and how does it work? PV materials and devices convert sunlight into electrical energy. A single PV device is known as a cell. An individual PV cell is usually small, typically producing about 1 or 2 watts of power. These cells are made of different semiconductor materials and are often less than the thickness of four human hairs.
