**What Is An Energy Broker License?** Energy broker licenses allow companies or individuals in deregulated states the ability to negotiate the purchase of electricity or natural gas between a customer and a supplier. Often times, energy brokers earn income by adding margin or broker fees to the supplier's rate.

Solar energy consists of both heat and light. The sun emits electromagnetic radiation, including visible light, ultraviolet (UV) light, and infrared (IR) radiation. Solar panels can convert both light and heat into usable energy.

Explore national energy market trends and learn how businesses can optimise energy procurement strategies by leveraging renewable energy growth, managing price volatility, and adapting to evolving regulations for long-term cost savings and sustainability.

Electricity brokers offer guidance on integrating commercial solar solutions into your energy portfolio. They assess the feasibility of solar installations, evaluate potential energy production, and calculate the return on investment. Solar energy reduces the reliance on the grid and substantial long-term energy cost savings.

An SREC, or Solar Renewable Energy Credit, is given to a homeowner for every MW hour (1,000 kWh) of solar electricity their system generates. For example, a 7kW solar system generating 8.5MWh of electricity per

# Solar energy brokering

year would earn 8.5 credits annually. 1 SREC = 1 MWh of solar production = 1,000 kWh of solar production
