The system's ability to integrate solar power and battery energy storage to provide uninterrupted power for EVs is a significant step towards reducing reliance on fossil fuels and minimizing grid overload. Simulink modelling of a charging controller and a detailed hybrid charging station is provided.

However, solar intermittencies and photovoltaic (PV) losses are a significant challenge in embracing this technology for DC chargers. On the other hand, the Energy Storage System (ESS) has also emerged as a charging option. When ESS is paired with solar energy, it guarantees clean, reliable, and efficient charging for EVs [7, 8].
