The Marriott's solar array of 2,700 panels is more than two football fields in size, which is too big for the roof of the hotel. So High placed the system on the roof of a warehouse near the hotel within Greenfield. To enable hotel guests to see how much power the system is producing in real time, High installed a meter in the hotel lobby.

With Commercial Solar Financing options and other funding sources, hotels can significantly progress toward achieving their energy goals while providing a positive return on investment. By embracing renewable energy, the hospitality industry can be crucial in advancing the transition toward a cleaner and more sustainable future.

2. INTRODUCTION Normally for generating electricity we will use renewable sources like wind, solar, and water are the main sources and non renewable sources like coal, petroleum, natural gas, nuclear energy and fossil fuels. Due to continuous usage of non renewable sources it is very difficult to find non renewable sources in future.

In an effort to track this trend, researchers at the National Renewable Energy Laboratory (NREL) created a first-of-its-kind benchmark of U.S. utility-scale solar-plus-storage systems. To determine the cost of a solar-plus-storage system for this study, the researchers used a 100 megawatt (MW) PV system combined with a 60 MW lithium-ion battery that had 4 hours of storage (240 ...
