Estimate your total savings, payments, and total energy usage with our FREE solar calculator. String inverters, also known as central inverters, are the oldest and most common type of solar inverter used today. They work by connecting a string of solar panels to one single inverter, which converts the total DC input into AC output.

String Inverters: The most common type, where panels are connected in a series, or "string," feeding into a single inverter. Ideal for solar systems with consistent sunlight. Microinverters: Attached to individual solar panels, they convert DC to AC right at the source, enhancing system efficiency and allowing for detailed monitoring of each panel.

The major range of solar inverters from the brand covers inverter solutions such as on-grid inverters (1-136kW), energy storage inverters (3-630kW), off-grid inverters (3-5kW), the energy storage inverter, and pump inverters.
