Types of Inverters. There are several types of inverters that might be installed as part of a solar system. In a large-scale utility plant or mid-scale community solar project, every solar panel might be attached to a single central inverter. String inverters connect a set of panels--a string--to one inverter. That inverter converts the power produced by the entire string to AC.

Inducverter Emulates induction machine characteristics. Generates a voltage vector reference. Self-start capability and can synchronize with the grid automatically. Operates in grid-connected mode. Operates on the deloaded operation of RES. Able to generate constant power under disturbances or grid faults.
