Need. Strong uptake of variable renewable energy is driving a requirement for storage in Australia''s electricity markets. The Australian Energy Market Operator''s 2022 Integrated System Plan states that the electricity market will need significant investment in new flexible, dispatchable capacity to support growth in renewable energy as the thermal fleet retires.

Thermal energy storage technologies allow us to temporarily reserve energy produced in the form of heat or cold for use at a different time. Take for example modern solar thermal power plants, which produce all of their energy when the sun is shining during the day. The excess energy produced during peak sunlight is often stored in these ...
