The concept and corresponding prospects of the thermal energy storage technique for EVs are illustrated in Fig. 3 in detail.

For EVs, one reason for the reduced mileage in cold weather conditions is the performance attenuation of lithium-ion batteries at low temperatures [6, 7]. Another major reason for the reduced mileage is that the energy consumed by the cabin heating is very large, even exceeding the energy consumed by the electric motor [8]. For ICEVs, only a small part of the ...
