Fluctuating solar and wind power require lots of energy storage, and lithium-ion batteries seem like the obvious choice--but they are far too expensive to play a major role. A pair of 500-foot smokestacks rise from a natural-gas power plant on the harbor of Moss Landing, California, casting an industrial pall over the pretty seaside town.

India has ramped up its wind and solar energy. It now needs to expand places to store it The country's lithium ion battery storage industry - which can store electricity generated by wind turbines or solar panels for when the sun isn't shining or the wind isn't blowing - makes up just 0.1% of global battery storage systems.

For example, when people are sleeping and thus using less electricity, the energy produced from wind blowing through the night can be stored in batteries -- and used when demand is high during the day.

Lithium-ion battery arrays are currently the energy storage medium of choice for wind and solar power. These systems can smooth out daily gaps in wind or solar generation, but only for a few hours ...
